Expenditure on Assets

Overall Expenditure on Assets was \$1.2m over forecast. This variance is largely due to delayed completion of 33kV cable works reducing costs, more than offset by increased costs for pole renewal and replacements projects due to the use of subcontractors.

Electra has a contracting arm and the margin relating to these transactions has been eliminated.

- Customer connections Actual \$0 Forecast \$94k
 Forecast customer connections in the AMP is based on a contribution formula relating to the size and type of developments. This is customer led and there were no large/industrial developments in 2015 resulting in the under spend.
- System growth Actual \$1k Forecast \$778k
 Expenditure in this category was below forecast due to:
 - The AMP states that when a feeder reaches 75% of its capacity it meets the
 threshold for system growth. The Tongariro cable project was forecast as
 system growth on the basis that it was expected to reach 75% capacity.
 However, due to stalled growth in the region it did not meet the 75%
 threshold and the project did not meet the system growth threshold.
 However, the project still went ahead as Reliability project refer below.
 - Redefinition of the 11kV cable project from System Growth to Asset Replacement and renewal.
- Asset replacement and renewal Actual \$6m Forecast \$5.2m
 Expenditure in this category was over forecast mainly due to completion of prior year works for pole renewal and replacements and redefinition of 11kV cable project from System growth.
- Reliability, safety and environment Actual \$2.3m Forecast \$1.6m
 - Expenditure in this category was over forecast mainly due to Tongariro St cable redefinition from growth to reliability. It was not originally forecast as a reliability project as it met the AMP n-1 performance criteria. However, due to the GXP upgrade there would not have been the required n-1 performance criteria. Therefore, this project was brought forward as the extra feeder was required to maintain n-1 performance.
 - The overspend was partially offset by the delayed completion of a 33kV cable project.
- Non-network assets Actual \$649k Forecast \$0
 Expenditure in this category was over forecast due to 2014 deferred expenditure relating to the head office building rolling into 2015 and IT expenditure not forecast

Operational Expenditure

Overall, Operational Expenditure was \$3.6m over forecast. The following commentary is provided for material variances:

- Asset replacement and renewal Actual \$2.6m Forecast \$1.2m
 Expenditure in this category was over forecast due to catch up of work deferred in previous years and increased costs due to use of subcontractors

 Forecast excluded growth in corporate costs such as Finance, HR and ICT.

An audit involves performing procedures to obtain evidence about the amounts and disclosures in the Disclosure Information. The procedures selected depend on the auditor's judgement, including the assessment of the risks of material misstatement of the Disclosure Information, whether due to fraud or error or non-compliance with the Determination. In making those risk assessments, the auditor considers internal control relevant to the company's preparation of the Disclosure Information in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the company's internal control.
